

may show

- scenarios as a range, or as several lines
- controls for what a decision maker can change: a hiring rate, a price, an intake cap
- a breach of a declared bound, marked on screen

must state

- the scenario record every number came from
- the model's version and hash, findable on the screen itself
- the declared constraints each scenario was checked against

never as a prediction

- a single confident forecast line
- an average of scenarios: a path no scenario produced
- a composite chart from runs with different settings
- an outcome set directly by a control
